

## 28. CURRENT ROUTING ADDENDUM

### GitHub-only 정본과 이미지 생성·확정 운영 규칙

#### Current authority

- BS-OPS-20260828-35 is the latest user-approved operational override.
- GITHUB\_REPOSITORY\_ONLY\_CURRENT\_CANON = TRUE. The repository is the only current canon, human-facing GDD, operational handoff, asset record, and evidence surface.
- NOTION\_STATUS = HISTORICAL\_REFERENCE\_ONLY / NO\_FUTURE\_READ\_WRITE\_REQUIRED. Historical records prove only their past state and cannot create a current requirement.

#### Image execution

- ACTUAL\_GAME\_CONSUMER\_REQUIRED and PRIMARY\_USE\_GATE\_REQUIRED remain unchanged. Required consumer metadata and provenance/rights fields must exist before generation.
- IMAGE\_GENERATION\_EXECUTION = USER\_PREAUTHORIZED\_AFTER\_CONSUMER\_REQUIREMENT. The agent may generate a candidate without a pre-generation approval interruption.
- POST\_GENERATION\_USER\_LOCK = REQUIRED\_FOR\_FINAL\_DIRECTION\_OR\_RUNTIME\_PROMOTION. Before lock, a candidate is not a final visual direction, runtime asset, release asset, or Human/Player Experience proof.

#### Repository receipt and evidence ceiling

- A locked result records its repository destination, exact path, consumer, SHA-256/provenance and rights state, then receives exact-head readback.
- This routing change does not claim Godot client rendering, Android readability, accessibility, performance, human usability, player experience, or release readiness. Those remain NOT\_RUN until directly evidenced.

## 29. NOTION MIGRATION RECEIPT

### Notion 구조·작업물의 GitHub 정보 이관 완료

#### One-time source migration

- NOTION\_READ\_ONLY\_ONE\_TIME\_SOURCE\_MIGRATION = COMPLETE. All future Blacksmith canon, human-facing GDD, handoff, asset, and evidence work stays in GitHub.
- NO\_FUTURE\_NOTION\_READ\_WRITE = TRUE. Old Notion pages remain provenance only and cannot become current requirements or receive destination readback.

#### Structure coverage

- Project Home / Hub, System Record, Direction, Flow, Core Systems, Enhancement Economy, Visual Bible, Visual UX Assets, Asset Library, Handoff, Validation, and Benchmark all map to existing current GitHub owners.
- The old Project Plan's superseded numeric tables, state models, milestone arrangements, and prior receipts are intentionally omitted as stale data; current decision owners remain authoritative.

#### Historical visual preservation

- All eight approved Visual GDD original PNGs are archived at docs/migration/historical\_notion\_gdd, outside runtime asset paths, and SHA-256 checked against the historical approval manifest.
- The archive is HISTORICAL\_REFERENCE\_ONLY\_NOT\_RUNTIME / NOT\_FINAL\_STYLE\_CANON / STALE\_DO\_NOT\_IMPORT. It preserves information architecture and provenance, never a current UI, balance, style, or player-evidence claim.

#### Verification

- The GitHub migration receipt and machine-readable manifest own the mapping. The GitHub-only migration contract checks each required destination and all eight exact binary hashes.
